

# US INVENTOR

Innovators, Inventors, Dreamers, and Builders

Did You Know You've Lost your Constitutional Rights to Protect a Patent and grow a business In America? That means, if you ever have an idea and want to protect it. You can't!

You can't shut down an infringer and keep others from using your patent any more in America. And if you can't shut down infringers, then they have no incentive to even try and work out fair licensing to pay you anymore. They have Discovered it's much cheaper to pay for legal fees and appeal for years, then pay the actual licensing fees they owe, America's inventors and small companies to grow their future competition.

This issue has led to a process called Efficient Infringement, where big companies just tie small inventive companies up in court for years. Why pay licensing fees and fund innovation when it's cheaper to pay legal fees and bankrupt it. But this effects everyone In America because patents rights are what built our country and economy. Patents built Amazon, Apple and Microsoft and build all your local businesses, they grow communities and provide local jobs that grow the American made economy.

WE have lost this RIGHT in America while China has strengthened it, driving all the new innovation and VC funding there. This is why everything is made in China. In China, they have a billion dollar start up every 3 days while in America we have none. The government is so concerned with how fast China is out innovating us that they are passing a major AI defense budget with your tax dollars to try and catch up, when all they should do is fix patents and the problem would be solved. It's America's entrepreneurs that are moving over there, because they have no fair equal opportunity over here anymore, because BIGTECH has lobbied to take it away from all of us.

They lobbied saying falsely that patent trolls were tying them up in court for years, costing them millions in legal fees, and congress believed them, with all that tech money pouring into Washington, and they passed The Innovation Act. This legislation has been a disaster for innovation as they have now been taking back America's issued patents.

They appointed the head of google to appoint PTAB judges to "relook" at issued patents alleging infringement to try to invalidate them. So far in the last 3 years they have invalidated over 3,000 patents. Destroying issued patents at a rate of 86% of those that come before the PTAB. Taking back everything from a "bedbug catcher" to the "automatic garage door opener," causing complete mayhem for Americas inventors because now if you try to assert your issued patent and the infringer ask for a PTAB reexamination then it will cost you at least \$500,000 to 1 million dollars just to try and keep your patent. Who has that? Not local inventors!

We now have a bipartisan bill in the house called The Inventors Rights Act H.R.5478 That will restore individual inventor's rights back. Please help us restore our economy and restore Constitutional patent rights again so EVERYONE in America can grow a business again AS THE CONSTITUTION STATES and not just big tech. Please call your reps and ask them to support The Inventors Rights Act and give us ALL the right to protect our patents and grow business again in America. Thank You!
